## 360 Degree Network Camera Package

**Make your network camera watch more widely and intelligently**

EeRise PanoView 360 Degree Network Camera Package working well with Network Camera and Video Server creates more monitoring values via real-time panorama technology.

PanoView 360 Package is composed of a panoramic lens, PanoView Application Software and PanoMobile 360 Degree Mobile Explorer for Java-enabled mobile devices. The viewing field is doubled while simultaneously watching 4 viewpoints like using 4 virtual PTZ cameras and live monitoring, recording, playback, and remote monitoring at the same time.

Motion Detection triggers recording intelligently while Privacy Zone Masking makes surveillance more flexible. To help easy access, built-in Webpage Generator could be the friendliest interface to help generate a sample webpage.

Would you like to experience the benefits of 360 degree video surveillance? EeRise PanoView has to be your first choice.

### **Possible Applications :**
